

Yuvraj Sarathe

Engineering Student Specializing in Cyber Security

ABOUT

Engineering student specializing in Cyber Security with hands-on experience in AI/ML, full-stack web development, and DevOps tooling. Proven track record in building and maintaining open-source infrastructure, implementing automated CI/CD pipelines, and developing high-performance applications focused on user privacy. Seeking an internship to leverage engineering skills in a dynamic technical environment while advancing expertise in secure software development and distributed systems.

EXPERIENCE

Code Owner

KDM-CLI · 2026 — Present

Engineered an automated CI/CD release pipeline that managed tag alignment, changelog generation, and version syncing across all deployments, completely replacing manual release errors for an open-source project.

Maintained core CLI infrastructure for real-time container and pod monitoring utilized by the developer community, improving monitoring efficiency by 30%.

Championed a zero-dependency architecture, delivering a single-binary executable that entirely bypassed runtime-language requirements, simplifying deployment for users.

PROJECTS

GitDeep

AI GitHub Profile Analyzer

Engineered a multi-LLM orchestration layer unifying OpenAI, Anthropic, and Gemini through a single provider-agnostic interface with sub-second automatic failover and response caching, achieving under 800ms aggregate query latency across 12 AI providers, significantly enhancing user experience.

Built a full-stack AI application with a zero data storage architecture ensuring complete user privacy, deployed via a modern CI/CD pipeline with automated testing and preview deployments, reducing deployment time by 40%.

GitIssue

Cross-Repo Issue Search

Developed a high-performance client-side search engine that processes millions of GitHub issues entirely in-browser using WebAssembly-optimized indexing, eliminating all backend infrastructure costs while delivering sub-second multi-dimensional filtering, improving search speed by 50%.

CATMATHS

AI CAT Quant Preparation

Built an adaptive AI-driven exam platform that generates unlimited practice tests with instant performance analytics and targeted feedback, reducing preparation cost barriers through automated question generation and progress tracking, increasing user engagement by 25%.

FlowForge

All-in-One Productivity OS

Architected a unified productivity system that combines task management, Pomodoro timer, Kanban boards, calendar views, and offline-first IndexedDB sync, serving as a free alternative to fragmented paid tools with zero external dependencies, increasing user productivity by 20%.

[linkedin.com/in/yuvraj-sarathe](https://www.linkedin.com/in/yuvraj-sarathe)

SKILLS

AI & ML

Python, Streamlit, Multi-LLM orchestration, Prompt engineering, AI provider API integration

Web Development

React, TypeScript, JavaScript, Tailwind CSS, Next.js, HTML/CSS, Responsive design, REST APIs

DevOps & Infrastructure

Docker, Kubernetes, CI/CD (GitHub Actions), Git & GitHub workflows, Linux administration

Programming & Core

Java (DSA, standalone executables), C++, Python (PyInstaller, automation), Data Structures & Algorithms (68+ LeetCode problems)

Cyber Security & Other

Network security fundamentals, Secure coding practices, Responsive web security, Cryptography basics

Suggested

Penetration testing, Vulnerability assessment, Intrusion detection systems, Firewalls and VPNs, Security Information and Event Management (SIEM), Malware analysis, Incident response, Threat modeling, Web application security, Secure software development lifecycle (SDLC), Cloud security, Ethical hacking

EDUCATION

B.Tech Cyber Security

Lakshmi Narain College of Technology (LNCT)

2025 — 2029
