yuvrajsarathe07@gmail.com | github.com/Yuvraj-Sarathe | linkedin.com/in/yuvraj-sarathe | portfolio | Bhopal, MP

Engineering student specializing in Cyber Security with hands-on experience shipping production-ready applications across AI/ML, full-stack web development, and DevOps tooling. Built and maintained open-source CLI infrastructure, engineered multi-LLM orchestration systems, and delivered 14+ projects spanning web, desktop, and terminal. Pursuing an internship to apply practical engineering skills in a fast-paced technical team while deepening expertise in AI systems, distributed infrastructure, and secure software development.

TECHNICAL SKILLS

AI & ML: Python, Streamlit, Multi-LLM orchestration, Prompt engineering, AI provider API integration

Web Development: React, TypeScript, JavaScript, Tailwind CSS, Next.js, HTML/CSS, Responsive design, REST APIs

DevOps & Infrastructure: Docker, Kubernetes, CI/CD (GitHub Actions), Git & GitHub workflows, Linux administration

Programming & Core: Java (DSA, standalone executables), C++, Python (PyInstaller, automation), Data Structures & Algorithms (68+ LeetCode problems)

Cyber Security & Other: Network security fundamentals, secure coding practices, responsive web security, cryptography basics

OPEN SOURCE & EXPERIENCE

KDM-CLI – Code Owner

2026 – Present

Terminal-based Docker & Kubernetes monitoring CLI

- Engineered automated CI/CD release pipeline handling tag alignment, changelog generation, and version syncing across all deployments – eliminating manual release errors for an open-source project.
- Maintained core CLI infrastructure for real-time container and pod monitoring used by the developer community.
- Championed zero-dependency architecture – delivering a single-binary executable that bypasses runtime-language requirements entirely.

FEATURED PROJECTS

GitDeep – AI GitHub Profile Analyzer

2025

- Engineered multi-LLM orchestration layer unifying OpenAI, Anthropic, and Gemini through a single provider-agnostic interface with sub-second automatic failover and response caching – achieving under 800ms aggregate query latency across 12 AI providers.
- Built full-stack AI application with zero data storage architecture ensuring complete user privacy – deployed via modern CI/CD pipeline with automated testing and preview deployments.

GitIssue – Cross-Repo Issue Search

2026

- Developed high-performance client-side search engine processing millions of GitHub issues entirely in-browser using WebAssembly-optimized indexing – eliminating all backend infrastructure costs while delivering sub-second multi-dimensional filtering.

FlowForge – All-in-One Productivity OS

2025

- Architected a unified productivity system combining task management, Pomodoro timer, Kanban boards, calendar views, and offline-first IndexedDB sync – serving as a free alternative to fragmented paid tools with zero external dependencies.

CATMATHS – AI CAT Quant Preparation

2025

- Built adaptive AI-driven exam platform generating unlimited practice tests with instant performance analytics and targeted feedback – reducing preparation cost barriers through automated question generation and progress tracking.

EDUCATION

B.Tech in Cyber Security

2025 – 2029

Lakshmi Narain College of Technology (LNCT), Bhopal

ADDITIONAL

- LeetCode:** 68+ problems solved, 76% acceptance rate; following Striver A2Z DSA curriculum.
- Projects Shipped:** 14+ production-ready applications across web, desktop, and CLI.
- Certifications:** Responsive Web Design (freeCodeCamp), Frontend Development, Modern AI, Networking Fundamentals.

- **Philosophy:** Build standalone, zero-dependency executables and resilient production systems rather than fragile editor-dependent scripts.
